Decidability

Reca Assignment Project Exam Help

A language L is decidable if and only if there exists a Turing machine T such that

$$\begin{array}{ll} https://powcoder.com \\ & \text{Reject}(\mathcal{T}) = \overline{\mathcal{L}} \\ & \text{Loop}(\mathcal{T}) = \emptyset. \\ Add \ WeChatnetpowcoder is the alphabet.} \end{array}$$

Recursively enumerable languages: definition

Assignment Project Exam Help

A language L is **recursively enumerable** if there exists a Turing machine T such that

https://powcoder.com

Strings outside L may be rejected, or may make T loop forever.

Add WeChat powcoder

Recursively enumerable: synonyms

Assignmentun Project Exam Help = computably enumerable

partially decidable

https://pepowteoderedcom
type 0 (in Chomsky hierarchy)

Add WeChat powcoder

= computable

... but risk of confusion, as "computable" is sometimes used for "decidable".

Assignment Project Exam Help Is every recursively enumerable.

Consider: https://powcoder.com

This is the language corresponding to the Halting Problem.

We know it's naddle.WeChat powcoder

Is it recursively enumerable?

Assignment Project Exam Help

So some recursively enumerable languages are not decidable. https://powcoder.com

Consider the list of undecidable languages given in Lecture 22.

Which ones are Actively Weel that powcoder

Theorem.

A language is decidable if and only if both it and its complement are r.e.

Assignment Project Exam Help

 (\Longrightarrow)

Let L be any decidable language. https://powcoder.com

We have seen that every decidable language is r.e. So L is r.e.

Now, the complement of a recidable targuage is also decidable.

(See Lecture 10 cmments on clothe stopped by the classification of the complements of the complements of the complements of the classification of the complements of the compleme

So \overline{L} is also decidable, and therefore also r.e.

So I and \overline{I} are both re-

 (\Leftarrow)

Let L be any language such that both L and \overline{L} are both r.e.

Since the Saignment Project Exame Help

https://peweoder.com

Note, each of these TMs might loop forever for inputs they don't accept.

Construct a new Author madive that suttate of the Construct and th

Input: x

Repeatedly:

Do one step of M_1 . If it accepts, then Accept.

Do one step of M_2 . If it **accepts**, then Reject.

M' is A decider: Project Exam Help

- \triangleright therefore is accepted by either M_1 or M_2 ,
- \triangleright therefore will eventually be either accepted or rejected by M'. https://powcoder.com

Furthermore, M' accepts x if and only if M_1 accepts x.

So M' is a decidated WeChat powcoder

So L is decidable.

A non-r.e. language

Is every language recursively enumerable?

Assignment Project Fxam Help

Assume HALT is r.e. https://powcoder.com

So, both HALT and its complement are r.e.

Add WeChat powcoder

Therefore, by the previous theorem, HALT is decidable.

Contradiction!

Therefore \overline{HALT} is not r.e.

Enumerators

Assignment Project Exam Help An enumerator's a Turing machine which outputs a sequence of strings.

This can be a finite or infinite sequence. https://powcoder.com

If it's infinite, then the enumerator will never halt.

It never accepts ar rejects; West keeps but putting strings, one after another.

If the sequence is finite, then the enumerator may stop once it has finished outputting. But the state it enters doesn't matter.

Enumerators

DefiAtissignment Project Exam Help

A language L is **enumerated** by an enumerator M if

https://powcoder.com

Members of L may be outputted in any order by M, and repetition is allowed.

Theorem Add WeChat powcoder

A language is recursively enumerable if and only if it is enumerated by some enumerator.

Theorem

A language is recursively enumerable if and only if it is enumerated by some enumerator.

Proof Assignment Project Exam Help (\iff)

Let L be a language, and let M be an enumerator for it.

Construct a Turing machine M' ps follows:

Input: a string x

Simulate Mand for each string of generates:

Test if x Uses, accept otherwise, continue WCOder

A string x is accepted by M' if and only if it is in L.

So Accept(M') = L. So L is r.e.

 $(\Longrightarrow) \text{ Let } \mathcal{L} \text{ be r.e. Then there is a TM} \overset{M}{\underset{\varepsilon, a, b, aa, ab, ba, be, aaa, aab, aba, \dots}{\text{Exam}}} \overset{L}{\underset{\varepsilon}{\text{Help}}}. \text{ Take all }$

Simulate the execution of M on each of these strings, in parallel.

As soon as any of them stops and accepts its string, we pause our simulation, output that string, and then resume the simulation.

CAREFUL: Add WeChat powcoder

Infinitely many executions to simulate, but we only have finite time! How do we schedule all these simulations?

```
Assignment Project Exam Help
Algorithm:
    For each k = 1, 2, \dots
        For lact tips://powcoder.com
                 (provided that execution hasn't already stopped).
             If this makes M accept, then
            A dutur Whereip half further wooder else if this makes M reject, then
                 output nothing, and skip i in all further iterations.
```

This Assignmented by Topic the Xam Help Any string accepted by M will eventually be outputted.

So this is an enumerator for L.

https://powcoder.com

This result explains the term "recursively enumerable" (and "computably enumerable").

It also explains why rie languages are sometimes called *computable*, since there is a computer that can *compute* all its men bers (i.e., can generate them all).

Exercises

Theorem.

A language L is r.e. if and only if there A secidement in the property of t

https://powcoder.com

This P is a verifier:

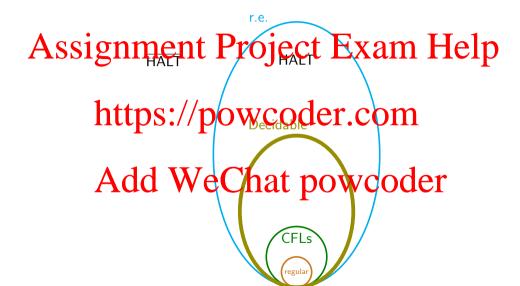

if you are given y then you can use P to verify that x is in L (if it is).

But it may be Add WeChat powcoder

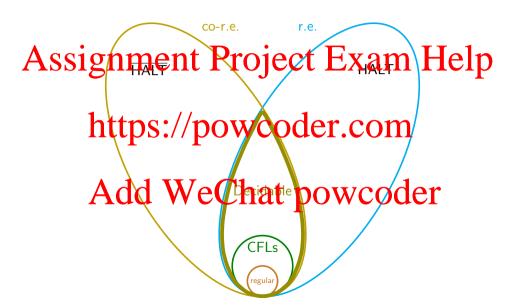

Theorem.

If $K \leq_m L$ and L is r.e. then K is r.e.
